

Install a new instance of CRIS3 on UNAIDS Web Server

Quick Guide

Date: 20.07.2009
Author: Xavier Piaget

1. Execute the last version of CRIS3 installer.
2. Choose the **Advance Mode** on the welcome wizard from.
3. Choose **Full Solution** on the type of installation from.
4. On the CRIS instance name form enter the instance name using the naming standard **CRIS_InstanceName**.
5. On the installation directory form change the default installation directory by clicking on **Select** button then go to **C:\inetpub\wwwroot\CRIS\Cris3_instances** path.
6. While selecting Cris3_instances folder, click on **Make new folder** button.
7. Name the new created folder with the instance name (the same you used on step 4 – e.g. **CRIS_InstanceName**).
8. Continue the installation as usual.
9. Open SQL Management Studio.
10. Expand **Databases** folder.
11. Expand the database with the instance name.
12. Expand the **Security** folder belonging to the database with the instance name.
13. Select **Users** folder.

14. Delete BI-Patchen\ASPNET user (if exists).
15. Collapse all folders.
16. Expand the main **Security folder**.
17. Select **Logins** folder.
18. Open the properties dialog for the user **CrisUser CRIS_InstanceName**.
19. Select **Server roles** (on the left).
20. Uncheck roles: **dbCreator** and **SysAdmin**.
21. Close SQL Server Management Studio.
22. Move the new desktop link (e.g Launch Cris CRIS_InstanceName) into the desktop Cris Instances Container.
23. Send an email and open a Support Request to BI CRIS3 Support in order to get the Domain Name Service and the Web Server updated with the new created instance.
